Unlocking a bicycle

QUICK GUIDE / SECTION 01

Start at a docking station

Sign in to the bike share app and scan the QR code on the handlebar. When the dock indicator turns green, pull the bicycle straight out of the slot.

Inspect the bike

Squeeze both brake levers, check the tires, and adjust the saddle. If a check fails, use Report a problem in the app and return the bicycle to the dock before starting a ride.

Allow time to return

A standard ride includes 45 minutes. The ride timer in the app starts when the dock unlocks and continues until the bicycle is secured at an official docking station.

Returns and receipts

QUICK GUIDE / SECTION 02

Confirm the return

Push the bicycle firmly into an empty dock. A solid green light confirms that the bicycle is locked and the ride has ended. An amber light means the return is still pending.

Handle a full station

If all docks are full, select Station full in the app. The app adds 10 minutes to the ride and directs you to a nearby station with free docks.

Check the ride record

A return receipt appears under Ride history. It shows the start and end times and the station where you returned the bicycle. If no receipt appears after five minutes, contact support from the app.
