Deposit a dataset

QUICK GUIDE / SECTION 01

Package the files

Upload one ZIP file containing the dataset and a README. Describe the file formats and columns in the README. Include a data dictionary when column names use abbreviations or coded values.

Set access terms

Choose a license for your dataset. If the dataset has an embargo, include the public release date in the deposit form. The archive shows the description while withholding the data files until release.

Keep the receipt

The archive sends a deposit receipt with the submission ID. A curator checks the package before publication. Use the submission ID when asking about a deposit under review.

Version published datasets

QUICK GUIDE / SECTION 02

Create a version

To correct the data in a published dataset, select Create new version and upload a replacement package. The archive preserves the previous version so readers can reproduce earlier results.

Write a change summary

Include a plain-language explanation of what changed and why. The summary is displayed on the new version's landing page. Examples include fixing a mislabeled column or adding a missing observation.

Cite the version you used

Each published version receives its own DOI. Use the DOI displayed on the version's landing page when citing the dataset. A link to the latest version is also shown in the version history.
